Notice about Ken's Study Journey Domain Name Change

It may be changed to kenstudyjourney.cn a month later.

Simply Speaking:

Due to the large number of Chinese users on my website, I have recently made a decision to attempt ICP Registration for my website to further prevent fake websites.

I have registered another domain name kenstudyjourney.cn. However, it is not enabled until the ICP registration will be complete.

Please note that kenstudyjourney.cn may be the new domain name for Ken's Study Journey official.

After it is enabled, you will be automatically redirected if you continue to visit kenstudyjourney.com. I will post another notice.

Dear students, teachers, and visitors,

Recently, I have discovered that the number of daily visitors on my website from China is far larger than that in all other countries.

After rigorous consideration, I have made a decision to attempt an ICP Registration for my website to further prevent fake websites. This may pass or fail, depending on many factors.

I have proved that my website may not lose visitors outside China after this process.

I have registered another domain name kenstudyjourney.cn which is not enabled until the ICP registration will be complete and so cannot be accessed currently.

Like issuing HTTPS/SSL security certificates, ID cards, passports and visas, ICP registration is a rigorous process, in which the government authorities will verify the website owner and domain name's identities, so it may take up to 15 to 30 days to complete.

I have registered another domain name kenstudyjourney.cn. However, it is not enabled (no DNS records yet) until the ICP registration will be complete.

Please note that kenstudyjourney.cn may be the new domain name for Ken's Study Journey official.

Once this process completes, you will see the registration number at the bottom of my website, linking to the official checking website (beian.miit.gov.cn). You will be automatically redirected if you continue to visit kenstudyjourney.com and I will post another notice.

By the way, I want to tell you that you always need to try new things. Only with trial-and-error can you boost your problem-solving skills.

Digital Signature and Certificate (A Level Computer Science (9618))

In computers, Digital Signatures are used to verify the identity of the sender. The sender has its private key and other people have its public key.

However, since the public key can be changed by hackers, Digital Certificate has been developed, which uses CAs (Certificate Authorities).

The 'CA's in the ICP registration are usually the Ministry of Industry and Information Technology (MIIT) of China. The public can go to https://beian.miit.gov.cn (like the CA's website) to check the website's identity.
